

Nurdin Muhammad Topan

I am an experienced backend developer with over a year of hands-on expertise in Node.js. My robust skill set includes proficient use of SQL databases like MySQL and PostgreSQL, as well as NoSQL databases such as MongoDB. Additionally, I have a solid understanding of front-end development with React.js.

MERN Blog APP

A simple project for my portfolio using the MERN stack, currently at version 1.0.0. The search, comments, follow, and change mode features have not been added yet (currently only dark mode is available). Other features like responsiveness, post categories, and others are already implemented. This web application is designed to help users manage and share their photo collections, providing an intuitive and user-friendly platform where users can easily upload, view, and manage their photos.
